

REPORT TO SHAREHOLDERS

FOR THE QUARTER ENDED 31 MARCH 2000

KEY FEATURES

- Very good operating results in South America, Mali and Namibia
- Five mines in South Africa perform poorly
- Heavy rains reduce production in North America and Australia
- Financial results
 - headline earnings down 8% to R449 million
 - total cash costs improve from \$223/oz to \$220/oz
 - total production costs stable at \$254/oz (\$255/oz last quarter)
- Growth
 - AngloGold's share of Morila will add 168 000 attributable ounces annually at a cash cost of \$137/oz
 - Geita will add 250 000 attributable ounces annually at a cash cost of less than \$180/oz
 - Sunrise Dam expansion will add 1.45 million ounces of production at a cash cost of \$186/oz
 - GoldAvenue – the gold e-commerce partnership – is announced

CERTAIN FORWARD-LOOKING STATEMENTS

Certain statements contained in this document, including without limitation, those concerning the economic outlook for the gold mining industry, expectations regarding gold prices and production, the completion and commencement of commercial operations of certain of AngloGold's exploration and production projects, and its liquidity and capital resources and expenditure, contain certain forward-looking statements regarding AngloGold's operations, economic performance and financial condition. Although AngloGold believes that the expectations reflected in such forward-looking statements are reasonable, no assurance can be given that such expectations will prove to have been correct. Accordingly, results could differ materially from those set out in the forward-looking statements as a result of, among other factors, changes in economic and market conditions, success of business and operating initiatives, changes in the regulatory environment and other government actions, fluctuations in gold prices and exchange rates, and business and operational risk management.

LETTER FROM THE CHAIRMAN AND THE CHIEF EXECUTIVE OFFICER

Dear Shareholder

AngloGold's operating results for this quarter are mixed. While our mines in South America, Mali and Namibia produced very good results, the mining operations in both North America and Australia experienced extreme weather conditions which severely reduced production. Both of these domains are now back to projected levels of production, and expect to recover the production shortfall of the first quarter by year-end. Five of our 13 South African mines performed poorly, resulting in a second disappointing quarter by the South African domain. Management has presented to the Board plans to address the problems experienced. These include, as set out more fully in a website document, improving mine infrastructure, extending operating flexibility through increased development and renewing the focus on labour productivity. The Board looks forward to their full implementation.

With the gold price received by the company marginally down quarter on quarter from \$319 to \$315, headline earnings before the deferred tax rate change declined by 8% to R449 million. Earnings per share were down 15% to 421 cents per share. Cash costs per ounce improved slightly from \$223 last quarter to \$220, and total costs per ounce were stable at \$254 (\$255 last quarter).

The quarter has seen promising new business developments. The company acquired stakes in two of Africa's best gold prospects: 40% of Morila in Mali and 50% of Geita in Tanzania. When in full production next year these mines – together with Sadiola Hill and Navachab – will produce some 800 000 ounces of cost-effective production annually. With the 500 000 ounces from Australia, 490 000 from North America and 420 000 from South America, this represents a considerable broadening of the mining mix of this company.

The e-commerce partnership, GoldAvenue, was also announced during this quarter. Together with our partners, J P Morgan and PAMP, we now have a vehicle to meaningfully reposition gold products in key developed markets.

Finally, the Board today approved a capital vote to expand AngloGold's Australian operation, Sunrise Dam. This project, at a total cost of some \$63 million, is expected to add 1.45 million ounces of production to the mine, extending its life by three and a half years and achieving an average cash cost for its remaining life of \$186 per ounce. The project will be entirely financed by internally generated funds. This is the second organic expansion project to be undertaken by AngloGold this year; the first was Yatela, in Mali, announced in February.

NICKY OPPENHEIMER
Chairman

BOBBY GODSELL
Chief Executive Officer

26 April 2000

SUMMARY OF OPERATIONS

SOUTH AFRICA

Overall performance

Headline earnings for the quarter were marginally better than the previous quarter. Gold production decreased by 3% to 41 873 kilograms but this was offset by a 5% reduction in production costs.

Unit cash costs of R46 491 for the quarter were 2% lower than the previous quarter. Productivity, expressed in grams per employee, was held to the previous quarter's levels while the lower production volumes resulted in square metres per employee falling to 4 from 4.28 in the previous quarter.

While production levels improved at **Great Noligwa** in the latter part of the quarter, the mine continued to disappoint with gold production reflecting a 7% decline, quarter on quarter. **Kopanang** produced at targeted levels although these were lower than in the previous quarter. **Tau Lekoa**, despite a 6% reduction in the grade recovered, managed to limit the reduction in gold output to 2% below the previous quarter. In addition, total cash costs were 7% lower than in the previous quarter.

Gold output remained at the level of the previous quarter at **Bambanani**, despite a drop in grade mix and poor face advance. At **Tshepong**, production was marginally down compared to the previous quarter while at **Matjhabeng**, production improved by 4%. At **Joel**, the quarter was severely impacted by a two-day power outage and inefficiency arising from the current shift arrangements. Consequently, gold production was down by 10% against the previous quarter.

Production at **TauTona** was hampered by poor face advance and problems associated with the ageing infrastructure. Gold production was down by 15% against the previous quarter. Despite seismicity in the shaft pillar area, **Savuka** increased gold production against the previous quarter.

Mponeng had an excellent first quarter, with gold production increasing by 11%. Gold production at **Elandsrand** was 6% lower than the previous quarter, mainly as a result of lost raiselines which affected grade mix and area mined. At **Deelkraal**, gold production was marginally higher than the previous quarter.

Ergo continued to perform to planned efficiencies despite production delays caused by high rainfall.

Tragically, 17 employees lost their lives in separate mine accidents during the quarter, compared to 10 in the previous quarter. Lost time injuries increased by 14.4% to 777 against the previous quarter, which was the best on record in the South African operations. When compared to the same period last year, however, it is encouraging to note that lost time injuries improved by 14%. Management is concerned at these increases and continues to intensify efforts to achieve safer working conditions.

Capital projects

At **Moab Khotsonq**, overall progress on the project continues to be satisfactory.

Progress on the **Mponeng** deepening project has been good. The equipping programme is slightly ahead of schedule with commissioning planned for 8 August 2000.

The **Joel Taung North** shaft project was delayed by four weeks, mainly due to a water intersection above 137 level.

Infrastructure development on levels 109 and 103 at the **Elandsrand** sub-shaft deepening project started one month ahead of schedule. The project is progressing satisfactorily.

OTHER AFRICAN OPERATIONS

AngloGold has a 38% interest in the Sadiola mine in Mali and owns the Navachab mine in Namibia.

Sadiola had another good quarter, with gold production up 4% to 53 000 ounces, largely as a result of increased recovery grades. Total cash costs (including royalty payments) were maintained at levels similar to the previous quarter due to the increased production. There were no lost time injuries for the quarter.

Progress has been made in discussions with the Government of Mali on the **Yatela** project, with the Ministry of Mines indicating that the key proposals submitted to them were acceptable. Partial loan financing through the Credit Guarantee Insurance Corporation (CGIC) has been arranged, subject to South African Reserve Bank approval, with the balance to be funded by shareholders' loans.

Although production at **Navachab** decreased by 8% to 17 000 ounces, an improved average revenue price and improved cost measures resulted in profit increasing to US\$1.1 million. Unit cash costs decreased to \$216 per ounce. In terms of safety, Navachab also performed very well. The mine received three safety awards in the quarter: the 5 star NOSA rating, a Chamber of Mines (Namibia) safety award, and a 'Safety Practitioner of the Year' acknowledgement, awarded to one of the mine's safety officers.

New acquisitions

AngloGold and Ashanti announced on 5 April that they had signed heads of agreement on the sale by Ashanti of an effective 50% of the **Geita** project in northern Tanzania to AngloGold. AngloGold will pay Ashanti \$205 million for the 50% share and will procure or provide project financing for Geita totalling \$130 million.

This acquisition, particularly when viewed with the agreement between AngloGold and Randgold Resources on the Morila project, is clear evidence of this company's commitment to changing its mining risk profile, by adding shallow and surface reserves to its existing deep level, hard rock assets. We are also confident that the acquisition will add to the company's shareholder value.

Geita has published reserves of 5.5 million ounces and resources of 12 million ounces, and is expected to have an average annual production of approximately 500 000 ounces at a cash cost of less than \$180 per ounce. Our own investigation of the mineralised deposits in the Geita licence area indicates that the potential for the discovery of further resources at Geita, and their conversion to reserves, is good. These resources would be accessible either through the five envisaged open pits or from adjacent ground.

The whole Geita area is highly mineralised. As a result, we expect to recover a further 9 million ounces of gold over the life of the project. At the adjacent Nyamulilima Hill prospect, which AngloGold is adding to the project, the current resource base is 2.1 million ounces, of which approximately one million ounces are likely to be converted to reserves. The total potential recoverable gold from the project is thus some 15.5 million ounces. This excludes Ashanti's interest in the Spinifex properties and any additional blue sky. These reserves will be treated at the Geita metallurgical facility, avoiding the need for an additional recovery plant.

The Geita recovery plant currently has a planned capacity of 4 million tonnes per annum (mtpa). This capability has the potential to be increased to 7 mtpa, at an estimated cost of \$38 million, thus significantly improving the project's net present value. This expansion will require a detailed feasibility study which is currently planned for 2004. The project is likely to produce its first gold in July this year.

AngloGold also announced in April that it had reached an agreement with Randgold Resources on the sale to AngloGold of 50% of Randgold Resources' stake in the **Morila** project in Mali. AngloGold will pay \$132 million for the share, which should yield approximately 168 000 attributable ounces of gold annually at an average cash cost over the life of the project of \$137 per ounce.

AngloGold is certain that this project, like Geita, will add value for our shareholders, at a double-digit discount rate. The property has reserves of some 5.8 million ounces, with an average grade of approximately 4.35 grams per tonne over its 14-year life. This has been verified by the results of 53 boreholes, drilled since December 1999 data on the project was made available. The project is made particularly attractive by the fact that higher grade ore will be available for treatment at the early stages of mining, which could improve the operation's NPV. The mine should produce its first gold in October 2000.

In the second quarter of 2000 construction will begin at Yatela and the Morila and Geita agreements will be finalised.

NORTH AMERICA

These operations comprise AngloGold's 70% interest in the Jerritt Canyon joint venture and the 67% interest (100% interest in production ounces, subject to contract obligations by the joint venture partners) in the Cripple Creek & Victor joint venture.

Production at these operations declined by 12% over the previous quarter to 114 000 ounces, largely as a result of severe wet weather conditions at **Jerritt Canyon**, which led to a 16% reduction in tonnage processed. Unit cash costs increased by 21% to \$190 per ounce at Jerritt Canyon; the low costs in the fourth quarter arose from exceptional grades realised during that period.

Capital expenditure for the first quarter was \$3.1 million or \$1.0 million less than fourth quarter levels as a result of lower spending on Murray development and completion of the installation of a cooling tower in the mill during the fourth quarter.

Production at **Cripple Creek & Victor** of 55 000 ounces was 2% lower than the previous quarter. Despite this slight decrease, unit cash costs remained steady at \$179 per ounce. Capital expenditure of \$4.4 million was considerably lower than in the previous quarter, as construction was slowed by weather. East Cresson mine development continued during the first quarter and Amendment No. 8 was filed in late March. Approval of Amendment No. 8 is expected by late October 2000.

The safety record at both operations remained very good with no fatalities or disabling injuries in the quarter.

SOUTH AMERICA

These operations comprise AngloGold's 100% interest in the Morro Velho mines and the 50% interest in the Serra Grande mines in Brazil, as well as the 46.25% interest in Cerro Vanguardia in southern Argentina.

Gold production at these operations totalled 105 000 ounces, 5% higher than the previous quarter, reflecting a net 3.3% increase in tonnage at all operations, except for **Morro Velho** where lower tonnage was compensated for by higher recovered grades.

Cash costs improved by 10% at **Serra Grande**, following the increase in production, and by 3% at **Cerro Vanguardia**. Cash costs were marginally higher at Morro Velho at \$129 per ounce. Besides increased production, cash costs were positively impacted by higher by-product credits and a reduction in operating costs.

The number of minor lost time injuries in the first quarter was disappointing but confirmed the correctness of the decision to implement NOSA throughout the operations. Task forces have been formed for each of the three mines with the result that the negative trend at Cerro Vanguardia has already been reversed. At Morro Velho and Serra Grande the inclusion of contractors in these statistics from the second quarter may, initially, adversely affect this performance.

AUSTRALIA

AngloGold's newly acquired operations comprise the wholly owned Sunrise Dam in Western Australia and Pine Creek operations, made up of Union Reefs and Brocks Creek, in the Northern Territory; and joint venture interests in Boddington (33.3%) in Western Australia and Tanami (40%) in the Northern Territory. These operations are expected to add more than 500 000 ounces to AngloGold's annual production.

Cyclonic rains in the northern and western areas of the continent negatively impacted production in the first quarter. The rain restricted access to ore in many of the open-pit mining areas and wet ore, in some instances, caused reductions in the throughput rates at the plants. As a consequence, aggregate production was limited to 118 000 ounces.

Although the heavy rain at **Sunrise Dam** significantly reduced the amount of ore recovered from the mine, the availability of ore stockpiles ensured that mill feed tonnages and head grades could be reasonably well maintained. The installation of additional crushing plant capacity during the quarter has removed a potential bottleneck and allowed the plant to achieve a throughput rate of around 2 million tonnes a year on the current ore blend. Improved recoveries resulted in production of 47 000 ounces being slightly better than expected. The availability of higher grade ore in the previous quarter resulted in exceptionally high production, which comprised one third of Sunrise Dam's production for 1999. With the ore grade scheduled for the current period slightly below the resource average, there has been a 29% fall in the quarter on quarter production. Although total cash costs for the quarter of \$184 per ounce were 51% higher than in the previous quarter, the performance continues to reflect the inherent low cost structure of the mine.

A record wet season at **Pine Creek** curtailed mining at Union Reefs in the first quarter. With mining forced into lower grade areas, both the volume and grade of ore being processed through the Union Reefs mill were negatively impacted. Although rain disruption at Brocks Creek was not as great, the increasing hardness of the ore being processed reduced plant throughputs. Union Reefs' production for the quarter was 26 000 ounces, 24% down on the previous quarter. Total cash costs increased to \$304 per ounce, an increase of 20% over the previous quarter. At Brocks Creek, production for the quarter was 15 000 ounces, 12% lower than the previous quarter. Cash costs were unchanged at \$255 per ounce. With weather conditions expected to improve and the plant throughput rate at Brocks Creek improving following the relining of the semi-autogenous grinding mill, performance at Pine Creek is expected to improve over coming months. Mining at Brocks Creek is scheduled to cease in May but the plant will continue to operate on stockpiles until at least August, some two months longer than expected.

At **Boddington**, production increased by 5% over the previous quarter to 20 000 ounces and cash costs increased by 2% to \$219 per ounce. At **Tanami**, wet weather severely affected the operations and production decreased by 25% over the previous quarter to 10 000 ounces. As a result, cash costs increased by 23% to \$320.

Field exploration activities were effectively suspended during the wet season. Drilling programmes will resume during the second quarter.

Two lost time injuries were reported during the quarter.

Sunrise Dam expansion

The initial development of the Sunrise Dam operation was approved by the then Acacia Resources Board in May 1996. The development was based on what was, at that stage, a relatively small, data constrained resource. Subsequent exploration has significantly increased the size of the resource which, at the end of 1999, was estimated to contain 4.35 million ounces of gold. Plant capacity was subsequently upgraded to 2 million tonnes a year on a mix of oxide and fresh ore.

The completion of an intensive drilling programme during the first half of 1999 effectively defined the limits to the resources that are potentially recoverable by open-pit mining techniques. This, together with an improved understanding of the metallurgy of the resource and operating characteristics of the plant gained from three years' operating experience, allowed the start of a major feasibility study during 1999 to determine the optimal mine/plant configuration for the operation.

Following this study, the AngloGold Board has approved the development of the Sunrise Dam MegaPit. The plan essentially involves a major expansion of the open pit, coupled with an increase in the plant capacity to 2.5 million tonnes per annum of fresh ore. This is expected to extend the mine's life by three years to 2007, during which a total of approximately 2.3 million ounces of gold should be produced.

Significantly, this expansion will be funded entirely from the mine's cash flow.

GOLD MARKET

The average spot price of gold for the first quarter of 2000 was just under \$290 per ounce, compared with an average of \$295 for the final quarter of 1999. Once again, this average price concealed considerable volatility in the market during this period. During the quarter, the spot price traded between a low of \$274 and a high of \$319 per ounce. Much of the impetus behind the rally up to the highs for the quarter seems to have come from anticipation among short-term speculators in the gold market about announcements to be made regarding the price hedging policies of major gold mining companies. This speculation generated a cycle of buying during February, but the market has since returned to trade in a tighter but stable range at around \$280 per ounce.

For South African producers, the first quarter of 2000 saw a significant move in the value of the rand against the US dollar. From an exchange rate of R6.04 to the US\$ early in January, the local currency weakened to R6.52 at the end of the quarter, and is currently trading in a range around R6.60 to the dollar. This move in the currency has benefits for cash cost levels at South African gold producers. The weaker currency has also given important support to the local spot price of gold, which averaged R58 750 per kilogram for the three month period, compared with an average price of R58 123 per kilogram for the final quarter of 1999.

The first quarter has seen a better understanding develop on the workings of the gold sales agreement announced in September 1999 between European central bank members and other leading official gold holders. While sales of gold by the Swiss National Bank are likely to start in the near future, it is clear that these will be constrained by the ceiling on official sales agreed in September 1999. In addition, Swiss authorities have indicated that they are likely to effect such sales through conventional market channels rather than the exceptional method of lump sum auctions followed by United Kingdom authorities. In this regard, representatives of the Swiss National Bank have stressed their desire to avoid negative impact on the gold market through their sales of reserves. This has been a sentiment echoed also by Dutch Central Bank authorities, and sales of gold by Holland during the first quarter of 2000 were conducted in an efficient and non-disruptive manner.

The market appears to have found a level of support at around \$280 per ounce in both the physical and traded markets for the metal. Physical demand for gold during the first quarter has been healthy, and sell-offs in the equity markets have seen a measure of investor interest in gold.

The AngloGold open hedge position as at the end of March 2000 is shown below. The net exposure in the hedge is lower than that at the end of 1999, reflecting both deliveries into hedge contracts during the first quarter of the year, and the offset of open positions during the quarter.

Net Delta Open Hedge Position as at 31 March 2000

As at 31 March 2000, the company had outstanding the following net forward pricing commitments against future production. A portion of these sales consists of US dollar-priced contracts which have been converted to rand prices at average annual forward rand values based on a spot rand/dollar rate of 6.53 available on 31 March 2000.

	Kilograms sold	Forward Price Rand per kg	Forward Price US\$ per oz	Ounces sold (000)	% Position in US\$
12 Months ending					
31 December 2000	98 871	64 956	304	3 179	28
2001	97 867	73 261	336	3 146	65
2002	83 640	80 724	350	2 689	64
2003	53 837	85 539	347	1 731	80
2004	28 480	91 991	348	916	80
January 2005 - December 2009	107 300	118 406	362	3 450	81
Total	469 995	85 690	340	15 111	63

The marked to market value of all hedge transactions making up the hedge positions in the above table was R720 million (\$110 million) as at 31 March 2000. The value was based on a gold price of \$279 per ounce, exchange rates of R/US\$ 6.53 and US\$/AU\$ 0.61 and the prevailing market interest rates and volatilities at the time.

As at 26 April 2000, the marked to market value of the hedge book was R916 million (\$136 million) based on a gold price of \$278 per ounce and exchange rates of R/\$ 6.74 and US\$/AU\$ 0.59 and the prevailing market interest rates and volatilities at the time.

Call Options Sold	Amount (US\$)	155 500	30 670	33 450	8 000			227 620
	ZAR per US\$	R6.56	R6.57	R7.06	R6.94			R6.65
	*Delta (kg)	96 534	20 500	20 435	6 340			143 809

*The delta position indicated above reflects the nominal amount of the option multiplied by the mathematical probability of the option being exercised. This is calculated using the Black and Scholes option formula with the ruling market prices, interest rates and volatilities as at 31 March 2000.

NOTES

1. The financial results for the quarter ended 31 March 2000 are unaudited. Certain items relative to the previous quarter have been restated for comparative purposes.
2. With effect from 7 February 2000, AngloGold acquired 100% of the issued share capital of Acacia Resources Limited (subsequently renamed AngloGold Australasia Limited), a gold company operating in Australia. This followed the close of the offer on 24 December 1999 and the subsequent compulsory acquisition of the shares held by those shareholders who had not accepted the offer.

The results of AngloGold Australasia for the quarter ended 31 March 2000 have been consolidated.

3. During the quarter 351 009 ordinary shares were allotted at a price of R298 per share to complete the acquisition of AngloGold Australasia and 30 600 ordinary shares were allotted in terms of the Share Incentive Scheme, thereby increasing the number of ordinary shares in issue at 31 March 2000 to 106 996 287.
4. The following announcements were made on 5 April 2000:
 - 4.1 that AngloGold had entered into a non-binding heads of agreement to purchase from Ashanti Goldfields Company Limited an effective 50% joint venture interest in the Geita project in Tanzania for a cash consideration of US\$205 million. In addition, AngloGold will procure or provide further financing, totalling US\$130 million, for the project.
 - 4.2 that AngloGold had purchased a 50% share of Randgold Resources Limited's (Randgold Resources) stake in the Morila gold mining project in Mali for US\$132 million in cash.

This will result in AngloGold and Randgold Resources each having a 40% indirect interest in the project, with the balance being held by the Mali Government.

5. On 11 April 2000 it was announced that AngloGold, J.P. Morgan & Co. Incorporated and PAMP (Produits Artistiques de Métaux Précieux), had formed GoldAvenue as an independent company that would be the first to offer a comprehensive range of products and services for businesses, investors and consumers in the gold market primarily through the use of the Internet. GoldAvenue is scheduled to begin rolling out its products and services via the launch of a comprehensive gold website at www.goldavenue.com in the second half of 2000.
6. Earnings per share have been calculated using the weighted average number of ordinary shares in issue.
7. Orders placed and outstanding on capital contracts as at 31 March 2000 totalled R677.2 million, equivalent to US\$103.8 million at the rate of exchange ruling on that date.
8. Final dividend No. 87 of 1 100 South African cents per share was paid to registered shareholders on 31 March 2000. The dividend was paid to holders of American Depositary Shares (ADS) on 10 April 2000 at a rate of 83.43 US cents per ADS. Each ADS represents one-half of an ordinary share.
9. The 56th annual general meeting of AngloGold will take place at a function to be held at The Johannesburg Country Club, Napier Road, Auckland Park, Johannesburg, on Thursday, 25 May 2000 commencing at 12:00 (SA time). Registered shareholders are reminded to submit proxy forms timeously should they wish to do so.
10. This report contains a summary of the results of AngloGold's operations. Detailed information relating to the operations will be available on the Internet and in printed format from the investor relations contacts, whose details, along with the website address, appear at the end of this document.
